- Live coding

# “Classic” frontend-backend projects

- Frontend: Something with Javascript
  - React.js
  - vue.js
  - Angular.js
- Backend: Java
  - Application Server
  - Spring Boot
  - Quarkus.io

# “Classic” frontend-backend projects

- Mono repo
  - Unify build life cycle
- Separate repos
  - Version compatibility
- Unify configuration
  - Config formats
- Local development
  - Manage differences in development life cycle

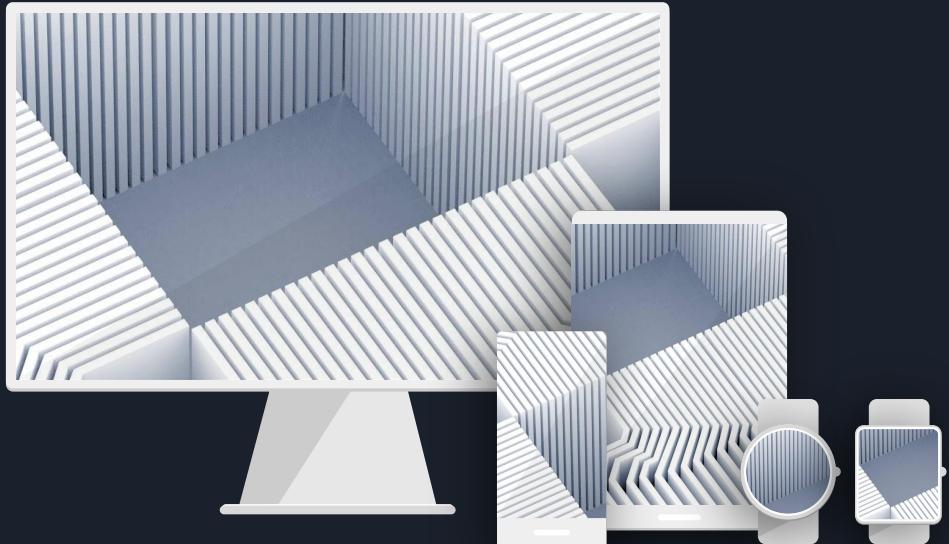

# Why would you use “Nothing but JS”?

- No break in tech stack - One ecosystem
- No break in build life cycle
- No concerns about frontend/backend compatibility
- One config for frontend and backend
- One development life cycle
- Easier refactoring / moving logic around

Live Coding
